# International Journal of Financial Engineering

## Submission Guidelines

1. The International Journal of Financial Engineering (IJFE) accepts submissions for review and possible publication, with the understanding that papers submitted are original work and are not under consideration at any other journal. Upon acceptance of a paper for publication, the authors will sign agreements to transfer the copyright to the International Journal of Financial Engineering and the Publisher (World Scientific). Authors will hold the Publisher and the Editor-in-Chief (or Associate editors) harmless against any suit, demand, claim or recovery, finally sustained, by reason of any violation of proprietary right or copyright, or caused by any unlawful matter published in the journal because of the actions of the authors. To submit papers to International Journal of Financial Engineering please follow the procedures outlined below.
2. The first page of the paper should include title of the paper and list of authors with their affiliations and email addresses. It should also indicate the name of the corresponding author.
3. Submit your paper as a pdf file through the following link: <http://www.editorialmanager.com/ijfe/login.asp>  
Accepted papers **must** submit the **final version** in a **.doc or LaTeX format** which satisfy the style guidelines described at the end of this document.
4. When submitting the final version of accepted papers, authors are asked to send an electronic copy of the papers prepared, if possible, using the format files of the journal. **Manuscripts prepared in LaTeX are preferred and strongly encouraged.** The format files can be downloaded from the web site of World Scientific Publishing Company at the URL <http://www.worldscinet.com/authors/stylefiles.shtml>.
5. There will be no page charge for the journal. The communicating author of each accepted paper will receive a PDF of the published version free of charge.
6. Upon receipt of the paper, the Editorial Board of IJFE will review the paper to make sure that it meets minimum standards of rigor and presentation, and the topic is of enough broad interest to the potential readership of the journal. When the Editorial Board decides that the submission meets those standards, the paper will be assigned to referees and the author will be notified that the paper has entered the review process.

## Style Guidelines

**Author Information:** Include the following information on the first page of the manuscript: (1) title, (2) author(s), (3) institutional affiliation, (4) address, and (5) telephone number.

**Abstract:** Include a one-paragraph abstract of no more than 100 words. Do not include references, footnotes, or abbreviations

in the abstract.

**Keywords:** Enclose with each manuscript, on a separate page, from three to five keywords.

**Typing Format:** Double space with a minimum of 11pt fonts. Margins of at least 1in.

**Headings and Subheadings:** Use no more than three levels of headings. Begin all headings at the left margin and capitalize the first letter of the first word only. Headings should be numbered as, e.g., 1, 1.3, 2.4.5, etc.

**Footnotes:** Each footnote should appear at the bottom of the page on which it is cited in the text and should be indicated consecutively with superscript Arabic numerals.

**Equations:** Number consecutively only those equations that are referenced in the text. Indent equations and place numbers in parentheses at the right margin.

**References:** List references alphabetically by author's last name at the end of the text of the paper. They can be cited in the text as, e.g., "According to Smith and Jones (1995), ..." or "... (Smith and Jones, 1995)".

**Style of References:**

Imai, J and KS Tan (2006). A general dimension reduction technique for derivative pricing, *Journal of Computational Finance*, 10(2), 129-155.

Joe, S and FY Kuo (2008). Constructing Sobol' sequences with better two-dimensional projection, *SIAM Journal on Scientific Computing*, 30(5), 2635-2654.

L'Ecuyer, P and C Lemieux (2002). Recent advances in randomized quasi-Monte Carlo methods, in M Dror, P L'Ecuyer and F Szidarovszki (editors), *Modeling Uncertainty: An Examination of Stochastic Theory, Methods, and Applications*, pp. 419-474, Kluwer Academic, Boston.

**Tables:** Type tables on separate pages after the references. Center the word "Table" followed by an Arabic numeral above the body of the table. Separate headings in a table from the title of the table and from the body of the table with solid lines. Verify that the text contains a reference to each table. When referring to a specific table in the text of the paper, use Table 1, Table 2, etc.

**Figures:** Figures must appear after the tables. Verify that the text contains a reference to each figure. When referring to specific figures in the text, use Fig. 1, Fig. 2, etc. When labeling figures, capitalize the first letter in the word and number with Arabic numerals (e.g., Figure 1). In figure titles, capitalize the first letter of the first word only. When supplying color figures, ensure that there is sufficient contrast to enable clear black and white printing. No figures will be printed in color.
